Professional Summary

Aspiring Software Engineer and Backend Developer pursuing a B.Tech in Computer Science and Engineering with a specialization in Artificial Intelligence and Robotics at VIT Chennai, graduating in 2027. Hands-on experience in Java, Python, C++, Spring Boot, React, SQL, REST API development, relational databases, and full-stack software engineering. Experienced in developing and testing enterprise applications and building scalable backend services, secure authentication systems, database-driven applications, and AI-powered workflows. Interested in software engineering, system design, application development, responsible AI, and building reliable technology solutions for real-world business problems.

Education

Vellore Institute of Technology (VIT), Chennai <i>B.Tech in Computer Science and Engineering – Artificial Intelligence & Robotics</i>	2023 – 2027 <i>CGPA: 7.9/10</i>
The Spice Valley Public School, Bodinayakanur <i>Class XII</i>	2023 <i>87%</i>
The Spice Valley Public School, Bodinayakanur <i>Class X</i>	2021 <i>87.6%</i>

Technical Skills

Programming Languages: Java, Python, C++, C, JavaScript, SQL
Backend Development: Spring Boot, REST APIs, Spring Security, JWT Authentication, Node.js (Basics)
Frontend Development: React, Vite, HTML, CSS
Databases: PostgreSQL, Microsoft SQL Server, MySQL
AI & Machine Learning: Artificial Intelligence, Machine Learning, Local LLMs, Prompt Engineering, AI-powered Applications, Semantic Search, Retrieval-Augmented Generation (RAG)
Development Tools: Git, GitHub, Maven, Postman, Swagger/OpenAPI, IntelliJ IDEA, VS Code
Software Engineering: System Design, RESTful Architecture, API Integration, Authentication, Authorization, Testing, Debugging, Agile Development, Software Maintenance
Core Computer Science: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks

Professional Experience

Software Development Intern – Eanwol <i>Full-Stack Software Development</i>	June 2026 <i>Chennai, India</i>
- Developed and tested REST API functionality for enterprise applications, supporting structured data retrieval and integration between backend services and frontend interfaces. - Built and integrated multiple full-stack application features using backend APIs, React-based user interfaces, and Microsoft SQL Server. - Developed SQL queries using joins, filtering, and distinct data retrieval to process information across multiple related enterprise database tables. - Transformed relational database query results into structured JSON responses, enabling reliable data exchange between backend services and frontend applications. - Developed and worked on multiple React application pages and integrated them with REST API endpoints for end-to-end functionality. - Validated API functionality using Postman and contributed across development, debugging, feature testing, bug fixing, and deployment workflows. - Worked with Git-based collaboration, code reviews, API documentation, and enterprise software development practices in a team environment.	

Projects

Enterprise AI Workspace

Java / Spring Boot / React / PostgreSQL / AI

- Developing a full-stack enterprise AI platform combining secure authentication, persistent AI conversations, document processing, semantic search, and AI-assisted productivity workflows.
- Designed RESTful backend services using Spring Boot and PostgreSQL with JWT authentication, Spring Security, and hierarchical role-based authorization for USER, ADMIN, and SUPER_ADMIN access levels.
- Implemented a persistent conversation system supporting 7 core conversation and message operations, including creation, retrieval, pagination, renaming, message storage, and deletion.
- Built a streaming AI chat architecture with React frontend integration, response cancellation, conversation persistence, context management, and stale-response protection.
- Implemented modular frontend functionality for authentication, dashboard navigation, AI chat, conversation history, search, settings, and administrative workflows.
- Developing document upload and text extraction capabilities as the foundation for semantic search, Retrieval-Augmented Generation (RAG), and document question answering.
- Designed the AI architecture to support local language models, enabling privacy-conscious and cost-efficient experimentation with responsible AI workflows.

Enterprise Vessel Information & API System

REST APIs / SQL Server / React

- Developed enterprise API functionality for retrieving and processing vessel movement and operational information stored across related relational database tables.
- Designed SQL queries using joins, filtering, parameterized queries, and distinct data retrieval for structured enterprise data processing.
- Converted SQL query results into structured JSON responses for frontend consumption and application integration.
- Integrated backend API functionality with React interfaces and validated endpoints using Postman throughout the development lifecycle.
- Contributed to debugging, testing, bug fixing, feature development, and application deployment workflows.

Full-Stack Travel Safety Platform

Full-Stack Development / Web / Mobile

- Built a cross-platform travel safety application integrating web and mobile interfaces to support safety-focused user workflows.
- Applied full-stack software engineering principles to integrate user interfaces, backend functionality, and structured application data.

System File Manager

C++ / Multithreading / Operating Systems

- Developed a multithreaded C++ utility for performing file management operations while applying operating-system, concurrency, and object-oriented programming concepts.
- Applied multithreading techniques to organize file operations and support efficient execution of independent file management tasks.

Autonomous Grocery Navigator

Python / ROS / Robotics

- Designed a ROS-based autonomous navigation solution in Python for indoor navigation and automated in-store item retrieval.
- Applied robotics, autonomous navigation, and software integration concepts to model a practical real-world navigation workflow.

Hackathon Experience

AIQoD Hackathon 2025

- Designed an AI-based approach to automatically identify and separate stamps and signatures from scanned document images.
- Applied artificial intelligence and image-processing concepts to address a practical document automation and information extraction problem.

Certifications

Artificial Intelligence

Skill Vertex / March 2024

- Completed professional training covering Python programming, Artificial Intelligence, and Prompt Engineering.
- Developed foundational knowledge of applying AI techniques and AI-assisted approaches to practical problem-solving.

Game Developer

Udemy / September 2024

- Completed practical training in game development using the Godot game engine and fundamental interactive application development concepts.

CorelDRAW Course Completion

Professional Development

- Completed training in CorelDRAW with practical exposure to vector graphics, digital design, and visual asset creation.
